The Keyboard Tray by LifeDesk features a counterbalance spring to help offset keyboard weight during height adjustments. No knob, lever, or ratchet handle required to set height; simply lift the platform to the desired position and release. Our platforms are available in three convenient widths: 19, 26, and 30 inches.

Center dial platform angle adjustment with degree indicator readout on left instead of standard tilt knob which has a tendency to break and unscrew
Additional Height Adjustment indicator readout on left – not included with many other models
